

Production-Ready.
Forensically Valued.
AI-Integrated.

Version 1.0.0 | Last Updated: January 2026

A Verified Operational Asset, Not Just a Concept.

CyntientOps is a production-grade system built for the specific regulatory complexity of New York City—where generic property management software fails.

The Tech Foundation

React Native / Expo SDK 54

Supabase / PostgreSQL

100% TypeScript Coverage

Status:

Production Ready (v1.0.0)

Active Scale:

18 Manhattan Properties

Workforce:

5 Active Workers

The Forensic Value

Asset Replacement Cost: \$0.6M – \$2.6M

Based on 203,777 lines of measured code.

Commercial Goal: Transition from internal advantage (FME) to high-margin SaaS.

Proven in the Field: Powering Franco Management Enterprises

Revenue Flow

Inter Tight Medium

Processing operations for **\$424,540** in annual revenue.

Workforce

Inter Tight Medium

5 active workers using biometric auth and GPS clock-ins daily.

Client Concentration

Inter Tight Medium

Serving **9** clients, including **76%** concentration with J&M Realty.

Three Perspectives, One Source of Truth.

The Worker (Execution)

Inter Tight Medium

Inter Regular
GPS-verified clock-in/out.
Offline-first task management.
EXIF-tagged photo evidence.

The Admin (Command)

Inter Tight Medium

Inter Regular
Real-time location tracking.
Intelligent dispatch.
Compliance alerts.

The Client (Visibility)

Inter Tight Medium

Inter Regular
Portfolio status.
Board-ready financial
overviews. Transparency.

Defensibility Through Domain Complexity

Powered by Nova AI and a Robust Service Layer

React Native Frontend

- Inter Regular
JetBrains Mono
- Zustand State Management (8 Stores)
 - Role-Based UI

Service Layer (142 Services)

Infrastructure

- Inter Regular
JetBrains Mono
- Supabase (Real-time DB)
 - Storage (Photos)
 - NYC API Integrations

Security: Biometric Auth | Tamper-proof Photo Hashing | RBAC | Full Audit Trails

Automating NYC Bureaucracy.

Value: Converts reactive public data into proactive management alerts.
Inter Regular, Technical Slate (#64748B)

The Asset Value: \$0.6M – \$2.6M Replacement Cost

Total Engineering Effort

Inter Tight Medium

203,777 Lines of TypeScript Code.

Engineering Effort

5,094 – 10,189 Engineering Hours.

Time-to-Market Impact

Rebuild Time: 8–16 months (4-person team).

Key Insight Box

Strategic Value: Time-to-Market

Recreating the offline engines, NYC pipelines, and multi-role logic is a massive fixed cost. The asset value is defined by the time saved.

Turning Compliance into a Profit Center

B2B2C Monetization Model

Pricing Architecture

Base Subscription	Add-On Seats	Premium Reporting
(Per building/month)	(Per worker)	(Automated Board Packets)

High-Margin SaaS Structure & Revenue Scenarios.

	Floor (Internal Only)	Growth (3 PMs)	Upside (NYC Foothold)
Scale	18 Buildings	75 Buildings	200 Buildings
Projected ARR	\$21,200 ARR	\$270,000 ARR	\$960,000 ARR

Unit Economics

High Gross Margins driven by efficient Supabase storage, capped OpenAI token usage, and low marginal cost per new building.

Roadmap: 2026 Execution Plan.

Clear-Eyed Operational Discipline: Risks & Mitigations.

Concentration Risk

Inter Medium

Issue: 76% reliance on J&M Realty.

Mitigation: Immediate expansion to 2-3 additional clients to dilute concentration.

Trust Risk

Inter Medium

Issue: Automated reporting requires absolute credibility.

Mitigation: Strict "Evidence-First" protocols and human-review gates before AI reports are distributed.

Technical Risk

Inter Medium

Issue: Current 1.6% test coverage.

Mitigation: Roadmap priority on increasing coverage to 40% and resolving Supabase auth errors.

Ready for Commercialization.

Commercial Readiness Summary:

- **A Solved Technical Challenge:** 200k+ LOC, v1.0.0 Production Ready.
- **A Validated Market Need:** Addressing **NYC compliance complexity**.
- **A Defensible Moat:** Offline-first architecture & Deep Agency Integration.

Next Steps:

1. Execute **April 2026 Pilot**.
2. Secure **First External SaaS Contract**.
3. Deploy the 'Control Layer' for NYC Real Estate.
